

PULSE FOOD CONTACT MATERIAL GOOD MANUFACTURING PRACTICE POLICY

Pulse Printing Products manufactures a range of approved inks and coating that can be used for food packaging in compliance with the EuPIA Good Manufacturing Practice 4th version March 2016. This runs in conjunction with quality management system ISO 9001:2015. The system is operated at the Pulse manufacturing and distribution site in Bristol, UK.

Pulse identifies those products intended to be used for food contact materials by labelling and with supporting information. GMP is implemented in every stage of the manufacture/package/despatch of these products.

It is the responsibility of printers and end users of the packaging to ensure that the packaging produced is suitable, by using the products in such a way as to ensure suitability and to monitor performance.

Direct Food Contact coatings are only produced in compliance with EuPia GMP.

Gary Sheppard
Managing Director
